CATLOC®

CATALYTIC CONVERTER THEFT PROTECTION

You can trust CATLOC®

Whilst metal theft on the whole has decreased in the UK, the theft of catalytic converters (CAT), diesel particulate filters and exhaust systems has continued to rise and is now estimated to account for up to 60% of all metal theft.

The most at risk vehicles include Light Commercial Vehicles (LCV's), Motor Homes, 4x4's and people carriers. These are targeted by thieves as by virtue of their design characteristics allow easy access to the vehicles CAT.

CATLOC® design, develop and distribute a range of effective solutions for reducing this crime, which is costing vehicle operators dearly.

The CATLOC® reputation is built on brand qualities, and recognised for strength, innovative design and cost effectiveness.

As an ISO9001 certified company, we are fully committed to providing quality products and services. We enjoy strong working relationships with many Police constabularies, insurance test houses and governing bodies to ensure our products are always designed to address and withstand the latest theft methods deployed by the modern criminal.

There are two main ways in which a CATLOC® system works; either by securing to the CAT itself and locking to the vehicle via a bespoke attachment method, or by shielding the most vulnerable area of the CAT, thus denying easy access and preventing removal.

All CATLOC® products use marine grade stainless steel for strength and durability and are supplied with high security anti-tamper fixings and the CATLOC® ISR® system as standard.

The ISR® marking and registration system is Police approved and accredited by Thatcham. The unique code that is etched into the CAT is recorded with all vehicle details on the ISR® (International Security Register). The CAT can be quickly traced back to a vehicle via the etched 24/7 ISR® telephone number, and evidence provided to police to assist with obtaining a conviction.

CATLOC® products are easy to install and are supplied with all of the necessary fixings and simple to follow illustrated instructions. Installation takes between 15-45 minutes, subject to the vehicle application.

When purchasing a CATLOC® system, please speak to the supplying Dealer who may be able offer an installation service if required. Alternatively garages, exhaust centres or mechanics could carry out the installation with relative ease.

Thousands of vehicle operators trust CATLOC® products to protect their exhaust systems.

Ask your local CATLOC® Dealer for more details or call +44 (0)8455 193902
